AI Habits Study Tracker

Project Question: Can an AI-assisted tracker improve study habits over two weeks?

Course: AI Skills Course (Topics 1-10) **Weightage:** 100 marks

Student name: _____ **Reg. no:** _____ **Dates (14 days):** _____ to _____

Important: The project needs a real 14-day run. All setup, prompts, templates, analysis format and reflection are ready in this file. Cells marked ____ or [FILL] must be filled with YOUR real numbers. Do not submit made-up data.

Contents

1 Project plan and chosen habits
2 Tracker design (Google Sheets)
3 Automation setup (Zapier + Google Calendar)
4 14-day daily log
5 Weekly summaries (AI-generated)
6 Progress infographic plan (Canva)
7 Prompt library
8 Verification report
9 Before/after analysis
10 Reflection: limits of AI motivation advice
11 AI skills and tools used
12 Final demo script and submission checklist

1. Project Plan and Chosen Habits

Goal: check whether daily AI reminders and weekly AI summaries improve my study habits, by comparing 14 days WITH the tracker against the previous 14 days WITHOUT it.

#	Habit	Daily target	How measured
1	Focused study	2 hours (120 min)	Minutes studied, logged at night
2	Sleep on time	In bed by 11:00 PM	Yes/No + actual time
3	Exercise / walk	20 minutes	Minutes, logged at night

Method

1. Days -14 to -1 (baseline): recall/log habits without reminders. Use phone screen time, timetable and notes to reconstruct honestly.
2. Days 1 to 14 (tracker period): log daily in Google Sheet, get AI reminders and a weekly AI summary.
3. Compare averages and completion rate for the two periods, then reflect on what AI could and could not do.

2. Tracker Design (Google Sheets)

Create a sheet named **Habit Tracker** with tabs: **Daily Log**, **Baseline**, **Summary**, **Dashboard**.

Column	Header	Type / Formula
A	Date	Date
B	Day no.	1 to 14
C	Study minutes	Number
D	Slept by 11 PM? (Y/N)	Dropdown: Y / N
E	Exercise minutes	Number
F	Mood (1-5)	Number
G	Notes	Text
H	Habits done (of 3)	=(C2>=120)+(D2="Y")+(E2>=20)
I	Completion %	=H2/3
J	7-day avg study	=AVERAGE(C2:C8) on row 8 onward

Summary tab formulas: average study minutes =AVERAGE(C2:C15); sleep success rate =COUNTIF(D2:D15,"Y")/14; exercise average =AVERAGE(E2:E15); overall completion =AVERAGE(I2:I15). Use Conditional formatting (green if target met, red if not) and add one Line chart (study minutes per day) and one Column chart (completion %).

3. Automation Setup (free tools)

Tools: Google Calendar (free), Zapier (free plan), ChatGPT (free), Google Sheets, Notion (optional backup), Canva (free).

A. Daily reminders

1. In Google Calendar create two repeating events: 6:30 PM *"Study block - 2 hrs"* and 9:30 PM *"Log today's habits in the Sheet"*. Set notification 10 min before.
2. Optional smart reminder: each morning ask ChatGPT with Prompt P2 (see Prompt Library) and paste the 2-line plan into the calendar event description.
3. In Zapier: Trigger = *Schedule by Zapier (every day, 9:45 PM)*. Action = *Gmail / Email by Zapier: send myself* "Did you fill today's row?" with link to the Sheet.

B. Weekly AI summary (Zap)

1. Trigger: Schedule by Zapier, every Sunday 8 PM.
2. Action 1: Google Sheets *Lookup Spreadsheet Rows* for the last 7 rows of Daily Log.
3. Action 2: ChatGPT (Zapier built-in) *Conversation* using Prompt P3 with the rows inserted.
4. Action 3: Google Docs / Notion / Email: save the summary as "Week 1 Summary" / "Week 2 Summary".
5. Free-plan note: if the ChatGPT step is not available, copy the 7 rows into ChatGPT manually and paste the answer into the Summary tab; mention this in your report.

Screenshots to attach: Calendar events, the Zap flow, a successful Zap run, a sample reminder email.

4. 14-Day Daily Log

Fill every night at 9:30 PM. Copy the same table from your Google Sheet when submitting (screenshot recommended).

Day	Date	Study min	Sleep by 11? (Y/N)	Exercise min	Mood 1-5	Done /3	Notes
1	____	____	____	____	____	____	_____
2	____	____	____	____	____	____	_____
3	____	____	____	____	____	____	_____
4	____	____	____	____	____	____	_____
5	____	____	____	____	____	____	_____
6	____	____	____	____	____	____	_____
7	____	____	____	____	____	____	_____
8	____	____	____	____	____	____	_____
9	____	____	____	____	____	____	_____
10	____	____	____	____	____	____	_____
11	____	____	____	____	____	____	_____
12	____	____	____	____	____	____	_____
13	____	____	____	____	____	____	_____
14	____	____	____	____	____	____	_____

Baseline (previous 14 days) - fill using honest recall, phone screen-time, college timetable, notes:

Metric	Baseline avg (days -14 to -1)	Tracker avg (days 1-14)	Change
Study minutes / day	____	____	____
Days slept by 11 PM (of 14)	____	____	____
Exercise minutes / day	____	____	____
Overall completion %	____	____	____
Mood average	____	____	____

5. Weekly Summaries (AI-generated)

After each week, run Prompt P3 and paste the AI output below. Then add your own 2-line correction after verifying numbers (see Section 8).

Week 1 Summary

AI output (paste here)
My verification note: numbers matched / needed correction: _____

Week 2 Summary

AI output (paste here)
My verification note: numbers matched / needed correction: _____

6. Progress Infographic Plan (Canva, free)

Use Canva template size: A4 portrait, 3 colours (navy, blue, green).

Section	Content
Header	"My 14-Day AI Study Tracker" + date range
Row 1	3 big-number cards: Avg study minutes, Sleep success %, Avg exercise minutes (Baseline vs Tracker with up/down arrow)
Row 2	Line chart: study minutes Day 1-14 (export from Sheets)
Row 3	Bar chart: completion % Week 1 vs Week 2 vs Baseline
Row 4	Streak calendar: 14 boxes, coloured by habits done (3/3 green, 2/3 yellow, 0-1 red)
Footer	Key learning (1 line) + "Made with Sheets, Zapier, ChatGPT, Canva"

Image generation skill: use Canva Magic Media or an AI image tool with Prompt P6 for header illustration; mention that AI images may contain wrong text, so add all text yourself.

7. Prompt Library

ID	Purpose	Prompt (copy-paste)
P1	Habit selection	I am a college student. Suggest 3 measurable study-related habits I can track daily for 14 days. For each give a numeric target and how to measure it. Keep it realistic for a student with classes.
P2	Daily plan	Today I have classes till [time] and these tasks: [list]. My habits: study 120 min, sleep by 11 PM, exercise 20 min. Make a simple hour-by-hour plan in under 80 words.
P3	Weekly summary	Here is my 7-day habit data (columns: date, study minutes, slept by 11 Y/N, exercise minutes, mood): [paste rows]. Calculate averages, best and worst day, and completion rate. Do not invent numbers. Then give 3 practical suggestions for next week in a table.
P4	Reminder wording	Write 5 short, friendly, non-guilt-tripping reminder messages (max 15 words) to log my study habits at 9:30 PM.
P5	Analysis check	Here are my baseline and tracker averages: [table]. Explain the difference in simple language and list 3 other factors (exams, holidays, illness) that could also explain it.
P6	Infographic visual	Flat, minimal illustration of a student at a desk with a calendar and checkmarks, navy and blue colour palette, plain white background, no text.
P7	Limits reflection	List the risks of relying on AI for motivation and habit advice for students.

Prompt-engineering techniques used: role + context, explicit format, constraint ("do not invent numbers"), word limits, and asking for alternative explanations.

8. Verification Report

AI summaries can contain wrong arithmetic or invented trends, so each weekly summary was checked against the Google Sheet.

Check	Method	Week 1 result	Week 2 result
Averages correct?	Recalculate with =AVERAGE in Sheets	[FILL]	[FILL]
Best/worst day correct?	Sort the sheet by study minutes	[FILL]	[FILL]
Completion % correct?	Compare with Summary tab	[FILL]	[FILL]
Any invented facts/trends?	Read line by line vs data	[FILL]	[FILL]
Suggestions realistic?	Check against my timetable	[FILL]	[FILL]
Corrections made	Describe edits	[FILL]	[FILL]

9. Before / After Analysis

Use the table in Section 4 and write the answer below in your own words using real numbers.

Template (edit numbers):

"During the tracker period my average study time changed from [__] to [__] minutes per day ([+/-__]%). I slept by 11 PM on [__] of 14 days compared with [__] earlier. Exercise changed from [__] to [__] minutes. Overall habit completion moved from [__]% to [__]%. The biggest improvement was in [habit]. The weakest habit was [habit], mainly because [reason]."

Possible confounding factors (mention those that apply): exams or assignment deadlines, holidays, illness, novelty effect (new tracker feels exciting at first), self-reporting bias, small sample (14 days, one person).

Conclusion format: "The AI-assisted tracker [did / did not clearly / partly] improve my study habits. Evidence: [1 line]. Limitation: [1 line]." A mixed or negative result is acceptable if explained honestly.

10. Reflection: Limits of AI Motivation Advice

- **Generic advice:** AI gives common tips ("take breaks") and does not know my real energy, health or family situation.
- **No accountability:** A reminder or message cannot make me act; the habit still depends on my own decision.
- **Possible errors:** AI summaries can miscalculate or invent trends, so every number must be verified.
- **Over-optimistic tone:** AI may praise progress that is small, which can create false confidence.
- **Not a replacement for people:** Stress, burnout, sleep problems or low mood need a teacher, counsellor, doctor or family, not a chatbot.
- **Privacy:** Habit, mood and schedule data is personal; share only what is needed and avoid names or sensitive details in prompts.
- **Short-term effect:** Motivation from new tools often fades after the novelty period; two weeks is not enough to prove lasting change.

11. AI Skills and Tools Used

Skill (Topics 1-9)	How used in this project
AI foundations	Understood that ChatGPT predicts text and can be wrong, which led to verification
Prompt engineering	Prompt library P1-P7
Image generation	Infographic header image (P6)
Automation	Zapier daily reminder and weekly summary
Productivity workflow	Calendar + Sheets + AI routine
Responsible AI	Verification report, privacy, honest reflection

Tool (free tier)	Use
Google Sheets	Tracker, formulas, charts
Google Calendar	Daily reminders
ChatGPT (free)	Planning, summaries, analysis help
Zapier (free plan)	Automation
Notion (free)	Optional backup of summaries
Canva (free)	Progress infographic

12. Final Demo Script (3-4 minutes)

1. **0:00** - State the question and 3 habits.
2. **0:30** - Show the Google Sheet: daily log, formulas, dashboard charts.
3. **1:15** - Show Calendar reminders and the Zap (flow + one successful run).
4. **2:00** - Show Week 1 and Week 2 AI summaries and the verification corrections.
5. **2:40** - Show the infographic and the before/after numbers.
6. **3:20** - Give the conclusion and 2 limits of AI motivation advice.

Final Submission Checklist

Item	Done?	Where
Tracker (Sheet link, view access)	[ ]	Section 2
Automation (Zap screenshots)	[ ]	Section 3
Daily log (14 days)	[ ]	Section 4
Weekly summaries (2)	[ ]	Section 5
Infographic (Canva export)	[ ]	Section 6
Prompt library	[ ]	Section 7
Verification report	[ ]	Section 8
Before/after analysis	[ ]	Section 9
Final demo	[ ]	Section 12
